HOMEOPATHY  
AND  
CANCER

A Holistic Approach of Cancer Cases  
Cured and Ameliorated by Homoeopathic Treatment  
Highlighting the Psychosomatic Aspects

EXCERPT  
of the forthcoming book

## FOREWORD

**The book will reveal fundamental concepts: first of all the treatment of cancer patients, and secondly the psychosomatic axis of the homoeopathic remedy.** The possibilities to mitigate the suffering of cancer patients and in some cases even to cure them are outlined in this book.

\* \* \*

The herein applied homoeopathic substances predominantly originate from the mineral domain and are applied in various potencies and in differing intervals.

\* \* \*

There are particular cases or particular phases during treatment where homoeopathy is simply indicated. By placing the human being, rather than the local symptom at the centre, it is a holistic medicine. Each case penetrates to the very nature of the patient and makes the character transparent and shows the individual constitution of the person.

## INTRODUCTION

The cases presented in this book urge conventional medicine not to withhold homoeopathic treatment from the patient any longer. This claim is confirmed by daily experience in which therapy-resistant cases are treated homeopathically and where homoeopathic remedies are frequently able to initiate a healing process. **Therefore, posing the question whether homoeopathy is an alternative or a complementary medicine is obsolete – homoeopathy is simply part of medicine. As shown by the cases presented, the only question worth asking is to decide when conventional medicine is indicated and when homoeopathy is indicated and when both methods should be applied simultaneously.**

## LONDON 1999

### REFINED CASE ANALYSIS IN DAILY PRACTICE BASED ON TWO LEVELS OF REPERTORISATION (KENT AND SCHOLTEN)

**OBJECTIVE:** Extension of conventional case analysis to the method of JAN SCHOLTEN focusing attention on life circumstances of the patient, as described in the analysis of the periodic table.

**METHODS:** Conventional repertorisation often merely gives suggestions of remedies, whereas investigating the life circumstances of the patient and comparing them with the principal meanings of the elements and various salts (minerals) frequently lead to clear identification of the remedy.

### EXAMPLE

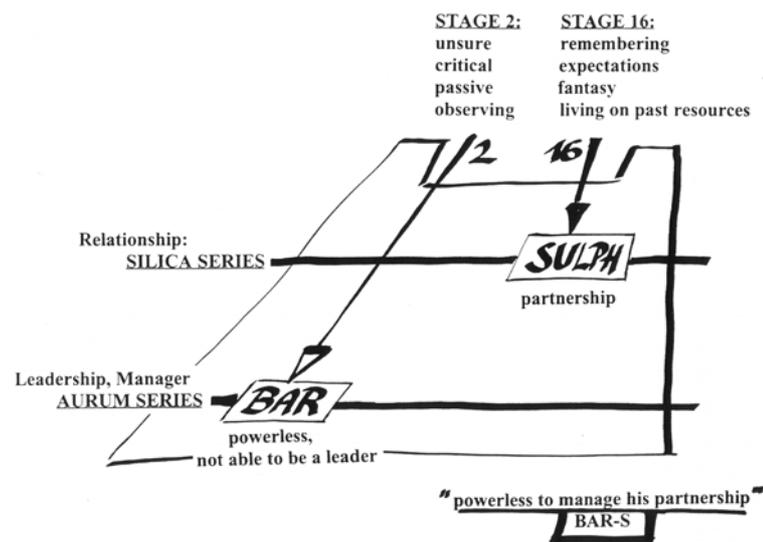

**CASE:** Persisting high blood pressure after removal of the right kidney because of malign cysts. The remaining left kidney also showed cysts, but patient refused further examinations.

**SYNTHESIS:** Generalities/tumour/cysts:  
aur2, bar-c3, calc3, calc-s2, sulph, lycl etc.

Calc, calc-s, lyc did not help much.

**Life circumstances (SCHOLTEN):**  
Here a differential diagnosis was possible.

After a period of years a peculiar symptom came to the surface: his wife had a relationship with another man and wanted to separate.

**RESULTS:** Barium sulfuricum immediately cured his suffering from "powerless in his partnership." Soon after the first dose the blood pressure was normal. The couple separated.

### DIMENSIONS OF HOMEOPATHIC MEDICINE

#### Introduction

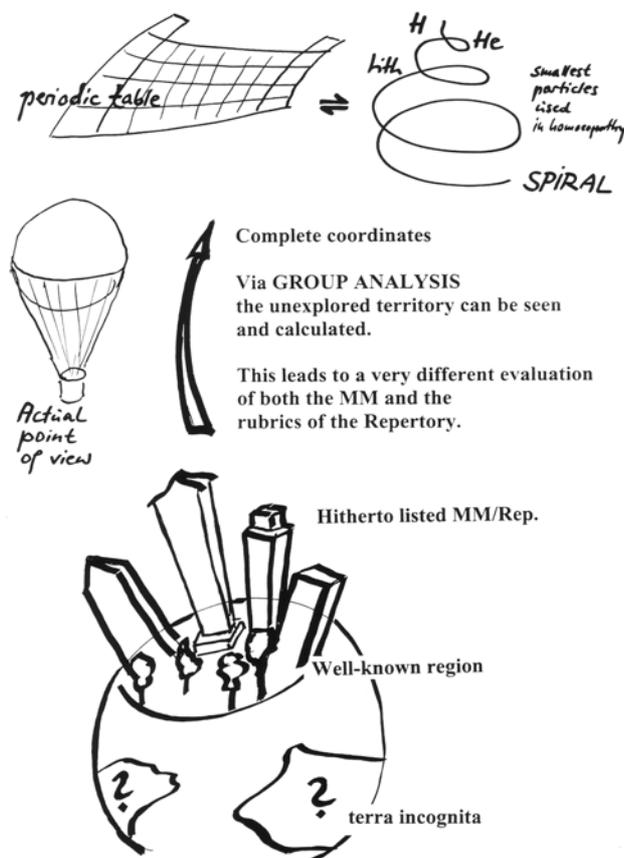

It appears that the 21<sup>st</sup> century requests that patients should be treated in a holistic way that includes their life conflicts.

The elaboration of the periodic table by JAN SCHOLTEN has brought about a quantum leap and we are now able to prescribe on a high hierarchic level. We now have clear essences and a classification for the minerals, which CONSTANTIN HERING longed for more than a century ago.

LIFE THEMES can be associated with elements of the periodic table and this insight opens the way to a high level of case analysis.

There is a question arising: are we limited by remedies that are well-proven as nat- m, nat- c and nat-s or are we today in a position to go further by the method of group-analysis to understand also nat-f, nat-i, nat-nit etc which have the same importance but have not been proven or are not well-proved.

R. FLURY  
J. SCHOLTEN

#### **Part III**

CASE TAKING

CASES  
Hairy Cell Leukemia  
Anaplastic Astrocytoma III  
Cancer of the Mamma, Metastasis

## CASE TAKING

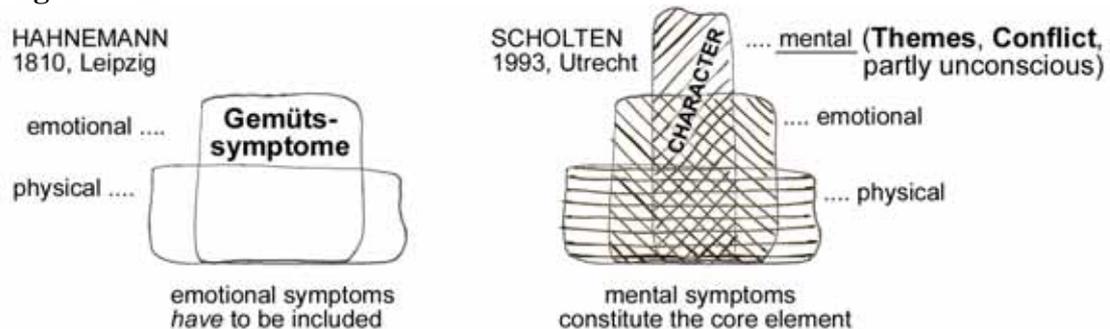

On the basis of the constitution a disease may happen or not. The healthy part has to be recognized (R.FLURY).

The mental symptoms precisely indicate a remedy (SCHOLTEN, periodic table).

**HAHNEMANN** tried to stress the *emotional sphere*; in his attempt to describe these emotional spheres, he was not yet able to see the hidden themes. These subtle energies (emotions, “*Gemüts-symptome*”) have the power to disturb an organism and to promote disease. The §§ 210 to 214 give a first hint as to which direction we should look to. Based on this observation psychosomatic aspects of diseases became evident.

The elaboration of the periodic table by **J.SCHOLTEN** brought a deep insight into the elements, enabling us to identify the *mental character* of the elements and moreover to look at these elements in comparison.<sup>1</sup> Based on this evaluation, we are suddenly able to see *conflicts and themes* associated with a particular character that are partly subconscious to the person. By carefully exploring the patient’s life we can associate the themes with certain remedies.

### Diagram 10a

SCHOLTEN enabled us to go straight to the **MENTAL SYMPTOMS** and to reflect the central focus of the patient.

Characters and life-themes do not only exist in a pathological way, **originally they are virtues, and they emerge as such at the very moment life conflicts are managed.** Consciousness hereby is a necessary element, if not for the patient at least for the doctor. However, it is the **p o t e n t i z e d r e m e d y**, which induces the healing process, brings about transformation and restores health.

### CURE OF TUMORS BY HOMOEOPATHY AND A CRITICAL REVIEW OF CONVENTIONAL AS WELL AS HOMEOPATHIC APPROACHES

**Allopathy** is aware that disease is a *misinformation*, for instance in the genetic code, but frequently treats a tumor as if it is something *separate* from the whole organism. It tries to eliminate such a diseased region by physically destroying the tumor either via surgery, chemotherapy and/or radiation. We know, what frequently happens in these cases: metastasis develops – the degrading process keeps going on, and the case becomes more severe.

**Homeopathy** on the other hand defines disease as an aberration (dissection) of the life-force; this means that disease is a (dis)function of the healthy organism and as such cannot be separated from it! Therefore we should try to find a constitutional, a deep acting remedy that in its character mirrors the individual and is in accordance even with the healthy part of the organism. In order to do so we have to take into consideration constitutional signs, the type of the person and the character of the patient. Indeed, constitution consists of lifelong signs and symptoms of a person (I refer to RUDOLF FLURY).<sup>2</sup>

## SYNDROM-SHIFTS

The Rules of HERING Show how far Advanced a Case is.

### EXAMPLES

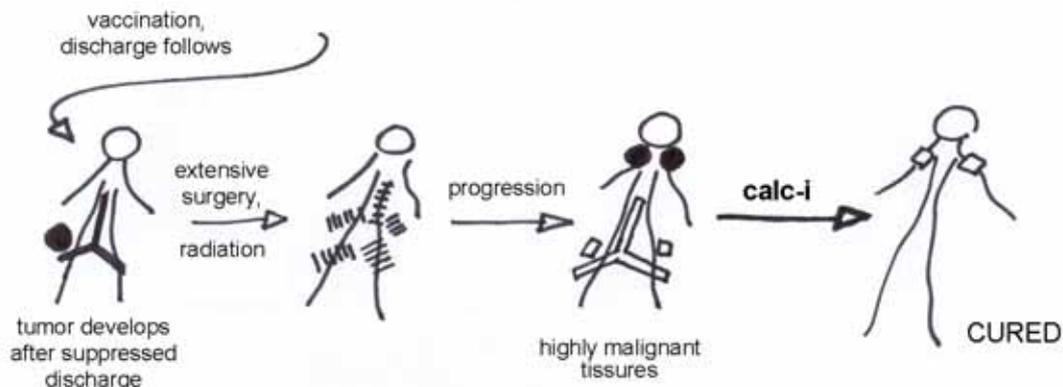

#### Two cases of HODGKIN's disease

Both ladies have been vaccinated – both had then leucorrhoea and local therapy until leucorrhoea was arrested! Soon after treatment swelling of the inguinal lymph nodes!

#### (C) Highly malignant tumor<sup>3</sup>

Extensive operations and radiation (1982) did not cure. Patient consulted me with metastasis on the neck. – Calc-i cured the case.

Diagram 10

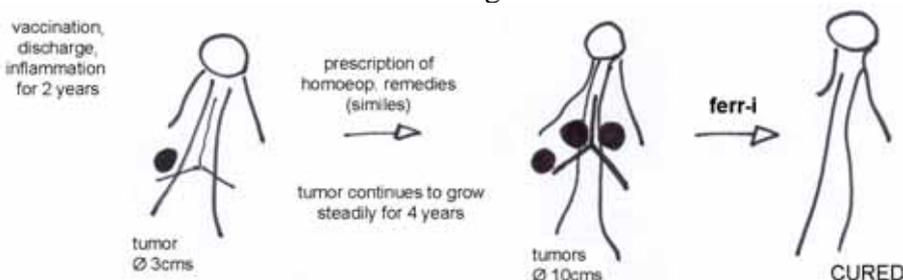

Suppression by surgery and radiation. Malignant lymph nodes progress and tumors migrate from downwards upwards (from the inguinal region to the cervical region) and perform highly malignant tissues.

#### (D) Slowly growing tumor<sup>4</sup>

Before I was able to find ferr-i, the tumor grew from three to ten cms in diameter. After ferr-i old symptoms such as headache, pain in the stomach, pain in the shoulder, vertigo, etc. come up slightly (in the reversed order of appearing) while the tumor disappeared.

Diagram 11

<sup>3</sup> Winter, 1993; *Homoeopathic Links* or in *Homoeopathic Links*, Vol. 6 (4)

<sup>4</sup> Summer, 1998; *Homoeopathic Links*; Vol.11 (2)

**After suppressing the inflammation by allopathic remedies, tumors developed. In both cases, vaccination was a trigger. And again, the body tries to eliminate pathogenic elements: both ladies developed leucorrhoea.** However, this discharge of the body was again suppressed by medication. Indeed, such a **chain of suppressions** - especially those of inflammations - caused the development of malignant symptoms.

In tumor cases we can frequently see a history of consecutive inflammations and their suppressions.

On the other hand, both ladies have been cured by **one single remedy (calc-i, ferr-i)**.

In both cases disease progresses toward the centre and will ultimately threaten the patient's life.

Concerning a cure, the symptoms reappear in reversed order. After taking the remedy the symptoms shift from inside to the outside, from the vital organs to the less vital organs. In each individual case, the law of HERING shows if and how a cure is possible!

#### SUMMARY OF CANCER TREATMENT

##### Cure or Amelioration of Cancer by Using Mineral Remedies

**SUMMARY:** The results using potentized mineral remedies to treat cancer are presented on the basis of eight cases. Investigating the patient in a holistic way (mental / physical), we use these tiniest building blocks to trigger a healing process. By applying this approach we observe with increasing frequencies remarkable results.

**PURPOSE:** The results using potentized mineral remedies to treat cancer are presented on the basis of eight cases. In relation to conventional treatment, each of the cases shows significant amelioration or cure once homoeopathic treatment sets in.

**METHODS:** The anamnesis is mainly based on the life conflict and the mental conditions of the patient. The mental constellation of the patient represents the very source of one's disease and indicates a specific remedy. Local symptoms have to fit the overall healing capacity of the chosen remedy. In principle a repertorization is made on the elaboration of the periodic table by J. SCHOLTEN. Usually *group analysis* easily reveals one element of the mineral (e.g. bar), the second one has to be elaborated carefully (e.g. phos for bar-p).

**RESULTS:** Remedies used by this method show a *deep action upon the psychological constellation* of the patient and are capable to dissolve malignant tissues to restore health. Correct prescriptions act promptly enabling a healing process to take place, even if the patient is resistant to conventional therapy, i.e. surgery, radiation, chemotherapy.

**CONCLUSIONS:** In comparison to higher biological entities (plants, animals, nosodes) used in homoeopathy, elements / salts are simple in their structure (atoms, molecules). However in their potentized form, they represent life-themes associated to a given mineral as well as to the patient's life conflict (law of similarity). Indeed, we compare the energized state of the mineral, which is equivalent to a theme, an archetype, with the mental constitution of the patient. The tumor as a local symptom is a *result* of the disturbed life-force (C. BURNETT, Curability of Tumors) and only part of the system. *Since elements and minerals are the tiniest and most archaic units, out of which life is made of, the potentized forms represent pristine archetypes, which must have profound organizing capacities* (carbon for father / self confidence and their attributes, chlorine for mother or child and their attributes, silica for the family and its attributes, and iodine for cultural transformation, see cases overleaf). In most cases the psychological constellation is already evident in early *childhood* and is later on expressed to an even larger extent.
