Illustration. I refer to new and old cases of earlier publications or partly published. The list of particular cases includes the remedy reflecting the conflict and the action of the remedy resulting in syndrome shifts according to Hering's Rules. Two cases will be highlighted, the follow up of "**Recurrence of a highly malignant non-Hodgkin lymphoma**" after another 21 years and "**Lung cancer, NSCLC**" after another 3 years:

Examples whereby the tumour subsides according to the **Rules of Hering**:

- Recurrence of a **highly malignant non-Hodgkin lymphoma: calc-i. *Malevolence after marriage.*** Highly malignant lymph nodes and an external tumour vanish, soon after a painful tumour at the shinbone appears and is cured with a second remedy (perfinity). **Cured since 33 years.**³
- **Osteolysis after breast- and stomach cancer: ferr-sil, sil and ars (perfinity). *Tragic family affairs.*** The bone destruction and insufferable pain subsides, while old rheumatic symptoms reappear, which easily can be cured. Period of observation 5 years.⁴
- **Visceral mesothelioma, kali-f. *Mistreatment in childhood.*** While the primary tumour subsides, earlier excised warts on the hands reappear and vanish. Observation 7 years.⁵
- Several other malignant tumours dissolved by using Scholten's approach resulting in syndrome shifts according to the Rules of Hering:
 - **Hairy cell leukaemia, calc-mur;**
 - **malignant pleuromesothelioma, phos;**
 - **low grade non-Hodgkin lymphoma, ferr-iod.**⁶

Examples whereby the malignant tumour **dissolves or necrotizes**:

- **Stomach cancer, acid-nit. *Mistreatment in childhood.*** Cured since 10 years.⁵
- **Astrocytoma grade III, plb-iod. *Father son conflict,*** cured 6 years.⁶
- **Lung cancer, NSCLC, kali-i. *Family-minded.*** 12 years later: no recurrence.⁷
- **Osteoplastic bone metastasis, calc-f. Expelled.**⁶ Tumour dissolved.

Conclusion:

- An overview of 30 years treating tumours with Scholten's approach shows that hundreds of minerals are available to treat cancer.
- The action of the remedies is different to therapies based on molecules. We observe syndrome shifts, according to the Rules of Hering.
- When the tumour subsides and old symptoms reappear, what else can it be than the reconstruction of an epigenome? Hahnemann's "reconstruction of the life force" and "reconstruction of the epigenome" are the same.
